

Water Grabber Ranger™

Over the years Basement Technologies, Inc., has recognized an unforeseen potential problem...a plumbing pipe burst or leak. Our waterproofing systems will solve any ground water problem – but what about a broken plumbing pipe? Our Water Grabbers® come with a sealed lid so gas and bugs do not get out, and kids cannot get in.

Over the years Basement Technologies has recognized an unforeseen potential problem...a plumbing pipe burst or leak. Our waterproofing systems will solve any ground water problem – but what about a broken plumbing pipe? Our Water Grabber® Bull Dogs™ come with a sealed lid so gas and bugs do not get out, and kids cannot get in.

To solve an unforeseen plumbing problem we are now installing a specialty drain in front of each of our Water Grabber® Bull Dog™ installations. The drain will be countersunk into the concrete in front of the Water Grabber® Bull Dog™ sump. This special drain will not let gas or bugs into the living space and, at the same time, protect your basement from potential pipe bursts.

"Trust your home to the leading name in the basement waterproofing industry … Basement Technologies"
